

WHO ARE WE LOOKING FOR

We are currently recruiting for Mechanical Field Services Technical Advisors able to supervise Installation, Commissioning and Maintenance of Heavy Duty/Aero-Derivative Gas Turbines and Steam Turbines for Power Generation or Oil & Gas applications.

WHAT WE OFFER

Basis Plant Services is growing and is investing heavily in enhancing its new Field Services Division.

At BPS you will not be treated as a number, you will be part of a multicultural team working towards adding value in key projects around the world.

You'll be encouraged to take on new challenges to grow and learn in the process. We value personal initiative in a way that larger companies may not have time for.

If you work at BPS you will be exposed to technology from different Original Equipment Manufacturers as we are flexible to adapt to the needs of all the main players in the Industry.

USUAL RESPONSIBILITIES

- Understanding contractual requirements and Head Office instructions.
- Ensure all in-field activities are carried out safely complying with company EHS guidelines and procedures.
- Reviewing plant engineering documents.
- Resource planning direction on the field.
- Forecast Tools and Materials required to complete the work scope.
- Active involvement and management of all mechanical center-line activities on site during Installation, Commissioning and Maintenance phases of both Turbine and auxiliary systems when required.
- Ensure the correct installation, pre-commissioning, commissioning and maintenance practices are followed.
- Transmit technical expertise to customers, field technicians and operators.
- Punctuality and accuracy of internal and external reports.
- Able to participate in meetings with Customers when required.

- Provide customers with technical direction and support on Original Equipment Manufacturer (OEM) packaged products.
